

SUMMARY

I am a web developer looking for a new challenge. I am proficient in Ruby, Javascript, Agile development, Test driven development, and Git workflow.

SKILLS

WEB DEVELOPMENT: Ruby, HTML, CSS, JavaScript, JQuery, Rspec, Jasmine, Git, Bootstrap, SQLite, PostgreSQL

SYSTEM ADMIN: Active Directory, Microsoft Exchange, Google Apps

PROJECTS

RAILS API

API built for my weather app that protects my API keys and tracks usage. This app is built with Ruby on Rails and sends a simple JSON response instead of the traditional web page.

<https://github.com/larry-cherry/Rails-API>

WEATHER APP:

Front-End App that utilizes a custom Ruby on Rails API to collect user location information to send User's local weather data. Works with and without geolocation enabled on the web browser. This app used a Ruby on Rails API backed to pull in the relevant data from DarkSky before sending it back to the front end. The backend and front-end are independent of each other.

<https://larry-cherry.github.io/WeatherApp/>

QUOTE MACHINE

Front-end Web App that pulls random quotes from an API and allows users to share quotes on Twitter. I built this app to not need a backend and filter random quotes from an API to be Twitter compatible.

<https://github.com/larry-cherry/QuoteMachine>

BUZZBUS

An application that is able to track your location and call you when you have reached your destination. I built the Database and imported all the bus stop locations using a deprecated API.

https://github.com/larry-cherry/buzz_bus

CROWDPLAYWEB

Worked with a team of experienced developers at South by Southwest Hackathon to create a music app for a musician in the UK. I assisted with communication, user stories, and development of the alternative AndroidApp.

EXPERIENCE

CODE WIZARDS

Web Development Instructor

Jun 2017 to Current

Instructing students from an elementary to middle school in the languages of HTML, CSS, Javascript, and Python. Providing assistance with student projects throughout the course.

DEV BOOTCAMP

Web Developer

Austin, TX

Oct 2016 to Mar 2017

Took a deep dive into web development with over 600 hours of experience. Developed applications using Ruby, Rails, Javascript, JQuery, Test Driven Development, and Agile Development

W3IT

System Administrator

Bryan, Texas

Apr 2015 to Nov 2016

Managed networking equipment and services for multiple medical clients. Provided timely user support for hardware and software applications.

EDUCATION

Texas A&M University

B.S. Agricultural Leadership and Development

Dev Bootcamp

Immersive coding program

SXSW Hackathon

Worked with a musician to build a real-time web app that could play music on multiple mobile devices.

(Pubnub, Android Development, Cordova, firebase)
